

The Equinox

CinemaTech is proud to offer its most versatile product yet – the Equinox.

A media room is the perfect combination of a private home theater and a traditional living room. It incorporates high-definition television and digital surround sound with a casual, entertaining environment. Equinox combines the best of both worlds – the comfort of casual seating and the advanced technology features of home theater furnishings.

THE STYLE

The Equinox was created to complement virtually any decor. The simple elegance of the base design allows it to adapt to any room style. By selecting from five unique foot forms and six outside arm options, you can create the look that's right for you.

This is no ordinary piece of furniture. The secret is in the framework that includes an adjustable forward sliding seat pan with three lockable positions available on most Equinox elements.

Equinox delivers a new level of customized comfort that makes it one-of-a-kind.

YOU DESIGN!

We know that one size does not fit all, and that's why we've developed a product with hundreds of configuration possibilities. From sectional sofas with varying seat pan widths to traditional, standalone chairs, you can order the exact furniture layout that fits your style and space constraints.

CinemaTech's Equinox allows you to create your own celestial beauty with the ultimate home entertainment seating.
